## Conveyor & Automation Technologies Launches Two Revolutionary New Robotic Palletizers

*The High Speed Robotic Palletizer and Multiple Line Palletizer will  
drive productivity in high-demand environments*

**TOWSON, MD** (August 1, 2015) – End-of-line production issues can make or break productivity rates—especially for manufacturers with product changeovers, varying package dimensions, or multiple lines. Conveyor & Automation Technologies, Inc. (C&AT) introduces two new palletizers, each uniquely designed to solve some of the market's biggest palletizing challenges.

The new [High Speed Robotic Case Palletizer LP-7500](#) is the flexible, reliable answer to accelerating production times for plants handling high output and a range of packaging materials or sizes. With two smaller overhead-mounted FANUC robots and unique C&AT-designed servo-driven end of arm tooling, manufacturers can count on it for:

- Quick, easy changeovers
- High-speed layer pick design
- Rates of up to 75 cases per minute
- Handling corrugated cases, shrink wrapped bundles and chipboard packs
- Complex pallet pattern formations

The new [Multiple Line Robotic Case Palletizer RP-2500](#) handles up to four production lines with a single palletizer, taking productivity to the next level for environments finishing multiple lines. The machine features unique, C&AT-designed end of arm pneumatic mechanical clamp-style tooling, mounted to a FANUC palletizing robot. Advantages include:

- Multiple line row picking
- Rates of up to 25 cases per minute
- Handling corrugated cases, shrink wrapped bundles and chipboard packs
- Variable pallet pattern formations

For more information on the productivity and cost benefits of our newest palletizers, visit [conveyor-automation.com](http://conveyor-automation.com) or email [info@conveyor-automation.com](mailto:info@conveyor-automation.com).

## **About Conveyor & Automation Technologies, Inc.**

C&AT is a systems integrator focused on custom-designed automation solutions across multiple industries. From novel line designs to system upgrades, our approach is uniquely customer-centric—with a low client-to-engineer ration, a culture built to tackle tough challenges, and a production process that virtually eliminates change orders. Learn more at [conveyor-automation.com](http://conveyor-automation.com).
